

Project Plan – Deliverables & Execution

Date	30 September 2026
Team ID	SWTID-2026-9986
Project Name	AI-ML & GEN AI – Study Assistant (Smart Study Companion)
Maximum Marks	5 Marks

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```

/project-root
├── src/           - Source code files (app.py, utils.py, models.py)
├── tests/        - Test files (test_app.py, test_models.py)
├── docs/         - Documentation (README.md, setup.md, user_guide.md)
├── config/       - Configuration files (config.py, .env, requirements.txt)
├── data/         - Sample data / datasets (if applicable)
└── requirements.txt - Python dependencies (or package.json for Node)
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://smartstudy-swtid-2026-9986.onrender.com (example)
Login (Demo) / Credentials	Username: demo Password: demo123
Platform / Hosting Provider	Render (or AWS / Azure / Vercel)
Repository Link	https://github.com/SWTID-2026-9986/ai-study-assistant
Demo Video Link	https://youtu.be/abc123xyz (example)

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

- Clone the repository:

```
git clone https://github.com/SWTID-2026-9986/ai-study-assistant.git
```
- Navigate to the project folder:

```
cd ai-study-assistant
```
- Create a virtual environment (optional but recommended):

```
python -m venv venv
source venv/bin/activate # (Windows: venv\Scripts\activate)
```
- Install dependencies:

```
pip install -r requirements.txt
```
- Set environment variables:
 Create .env file with required keys (e.g., API_KEY=your_key)
- Run the application:

```
python app.py
```
- Open in browser:
<http://localhost:8000>

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	API response time can be slow with large documents.	Implemented caching and optimized prompts.
2	PDF parsing may fail for scanned/handwritten files.	Inform user to upload clear, text-based files.
3	Limited free quota for LLM APIs.	Use fallback model and monitor usage.

Additional Notes / Comments:

The system is built as a prototype and works well for text-based study materials (PDF, DOCX, TXT).
 Future improvements include support for video lectures, handwriting recognition and multi-language support.
 Performance may vary based on document size and LLM model used.
